

x86 Intrinsics Cheat Sheet

Jan Finis
finis@in.tum.de

Bit Operations

Boolean XOR

```
__m128i xor(__m128i a, __m128i b) { return _mm_xor_si128(a, b); }
```

Boolean AND

```
__m128i and(__m128i a, __m128i b) { return _mm_and_si128(a, b); }
```

Boolean NOT AND

```
__m128i andnot(__m128i a, __m128i b) { return _mm_andnot_si128(a, b); }
```

Boolean OR

```
__m128i or(__m128i a, __m128i b) { return _mm_or_si128(a, b); }
```

Selective Bit Moving

Bit Scatter (Deposit)

```
__m128i pdep(__m128i a, __m128i b) { return _mm_pdep_epi32(a, b); }
```

Bit Gather (Extract)

```
__m128i pextr(__m128i a, __m128i b) { return _mm_pextr_epi32(a, b); }
```

Movemask

```
__m128i movemask(__m128i a) { return _mm_movemask_epi8(a); }
```

Extract Bits

```
__m128i bextr(__m128i a, __m128i b) { return _mm_bextr_epi32(a, b); }
```

Bit Masking

Zero High Bits

```
__m128i bzero(__m128i a, __m128i b) { return _mm_maskz_mov_epi32(a, b); }
```

Reset Lowest 1-Bit

```
__m128i bsr(__m128i a) { return _mm_undefined_epi32(); }
```

Mask Up To Lowest 1-Bit

```
__m128i bismask(__m128i a) { return _mm_undefined_epi32(); }
```

Find Lowest 1-Bit

```
__m128i bsr(__m128i a) { return _mm_undefined_epi32(); }
```

Bit Counting

Count 1-Bits (Popcount)

```
__m128i popcnt(__m128i a) { return _mm_popcnt_epi32(a); }
```

Count Leading Zeros

```
__m128i lzcnt(__m128i a) { return _mm_lzcnt_epi32(a); }
```

Count Trailing Zeros

```
__m128i tzcnt(__m128i a) { return _mm_tzcnt_epi32(a); }
```

Conversions

Convert Float 16bit to 32bit

```
__m128i cvtss2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Packed Conversions

```
__m128i packsswb(__m128i a) { return _mm_packsswb_epi8(a); }
```

Sign Extend

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Zero Extend

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

S/D/132 Conversion

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Reinterpret Casts

```
__m128i castss2ss(__m128i a) { return _mm_castss2ss_si128(a); }
```

Rounding

```
__m128i roundss(__m128i a) { return _mm_roundss_ss(a); }
```

Single Element Conversion

Single Conversion to Float with Fill

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Single Float to Int Conversion

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Single 128-bit Int Conversion

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Single SSE Float to Normal Float Conversion

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Old Float/Int Conversion

```
__m128i cvtsi2ss(__m128i a) { return _mm_cvtsi128ss_32(a); }
```

Register I/O

Load

```
__m128i _mm_load_si128(__m128i a) { return _mm_load_si128(a); }
```

Store

```
__m128i _mm_store_si128(__m128i a, __m128i b) { return _mm_store_si128(a, b); }
```

Aligned Load

```
__m128i _mm_loadu_si128(__m128i a) { return _mm_loadu_si128(a); }
```

Aligned Store

```
__m128i _mm_storeu_si128(__m128i a, __m128i b) { return _mm_storeu_si128(a, b); }
```

Unaligned Load

```
__m128i _mm_loadu_si128(__m128i a) { return _mm_loadu_si128(a); }
```

Unaligned Store

```
__m128i _mm_storeu_si128(__m128i a, __m128i b) { return _mm_storeu_si128(a, b); }
```

Byte Manipulation

Mix Registers

```
__m128i _mm_shuffle_epi8(__m128i a, __m128i b) { return _mm_shuffle_epi8(a, b); }
```

Byte Shuffling

```
__m128i _mm_shuffle_epi8(__m128i a, __m128i b) { return _mm_shuffle_epi8(a, b); }
```

Byte Zeroing

```
__m128i _mm_setzero_si128() { return _mm_setzero_si128(); }
```

Zero All Registers

```
__m128i _mm_setzero_si128() { return _mm_setzero_si128(); }
```

Broadcast

```
__m128i _mm_broadcastb2q(__m128i a) { return _mm_broadcastb2q_epi32(a); }
```

Byte Movement

```
__m128i _mm_shuffle_epi8(__m128i a, __m128i b) { return _mm_shuffle_epi8(a, b); }
```

Arithmetics

Multiplication

```
__m128i _mm_mul_epu32(__m128i a, __m128i b) { return _mm_mul_epu32(a, b); }
```

Addition / Subtraction

```
__m128i _mm_add_epi32(__m128i a, __m128i b) { return _mm_add_epi32(a, b); }
```

Div/Sqrt/Reciprocal

```
__m128i _mm_rcp_ss(__m128i a) { return _mm_rcp_ss(a); }
```

Min/Max/Avg

```
__m128i _mm_min_epi32(__m128i a, __m128i b) { return _mm_min_epi32(a, b); }
```

Composite Arithmetics

```
__m128i _mm_fmadd_ss(__m128i a, __m128i b, __m128i c) { return _mm_fmadd_ss(a, b, c); }
```

String Compare

```
__m128i _mm_cmpeq_epi32(__m128i a, __m128i b) { return _mm_cmpeq_epi32(a, b); }
```

Specials

AES KeyGen

```
__m128i _mm_aeskeygenassist_si128(__m128i a, __m128i b) { return _mm_aeskeygenassist_si128(a, b); }
```

AES Inverse Mix Columns

```
__m128i _mm_aesimc_si128(__m128i a) { return _mm_aesimc_si128(a); }
```

AES Encrypt

```
__m128i _mm_aesenc_si128(__m128i a, __m128i b) { return _mm_aesenc_si128(a, b); }
```

AES Decrypt

```
__m128i _mm_aesdec_si128(__m128i a, __m128i b) { return _mm_aesdec_si128(a, b); }
```

Cyclic Redundancy Check (CRC32)

```
__m128i _mm_crc32_u32(__m128i a, __m128i b) { return _mm_crc32_u32(a, b); }
```

Transactional Memory

```
__m128i _mm_commit_transaction(__m128i a) { return _mm_commit_transaction(a); }
```

Miscellaneous

```
__m128i _mm_pause() { return _mm_pause(); }
```
